-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1) Responsive to communication(s) filed on 4/29/03.

2a) This action is FINAL. 2b) This action is non-final.

3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4) Claim(s) 1-21 is/are pending in the application.

4a) Of the above claim(s) _____ is/are withdrawn from consideration.

5) Claim(s) _____ is/are allowed.

6) Claim(s) 1-21 is/are rejected.

7) Claim(s) _____ is/are objected to.

8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9) The specification is objected to by the Examiner.

10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

11) The proposed drawing correction filed on _____ is: a) approved b) disapproved by the Examiner.
If approved, corrected drawings are required in reply to this Office action.

12) The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

13) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

a) All b) Some * c) None of:
1. Certified copies of the priority documents have been received.
2. Certified copies of the priority documents have been received in Application No. _____.
3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

14) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
a) The translation of the foreign language provisional application has been received.

15) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

1) Notice of References Cited (PTO-892) 4) Interview Summary (PTO-413) Paper No(s) _____ .
2) Notice of Draftsperson's Patent Drawing Review (PTO-948) 5) Notice of Informal Patent Application (PTO-152)
3) Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____ . 6) Other: _____

DETAILED ACTION

Claim Objections

- I. Claim 14 is objected to because of the following informalities: The claim does not end with a period (.).

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. The factual inquiries set forth in Graham v. John Deere Co., 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.

4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

4. Claims 1, 3-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Huss, Jr. et al. (US-PAT-NO: 4,935,577).

Huss, Jr. et al. teaches an oligomerization processes utilizing a catalyst comprising a Lewis acid promoted non-zeolitic solid inorganic oxide, large pore crystalline molecular sieve and/or ion exchange resin, which can be in the presence of water, which is effected by catalytic distillation techniques.

More specifically, the subject process is directed to an alpha-olefin which is oligomerized in the presence of a catalyst comprising boron trifluoride, a minute amount of water in a particular adsorbent material such as silica to a product

predominating in those oligomer fractions having viscosities within the lubricating oil range such as the trimer and tetramer of 1-decene. While, this is the preferred alpha-olefin for this oligomerization. However, 1-olefins having from 3 to 20 carbon atoms and preferably 8 to 12 carbon atoms or various combinations of these alpha-olefins can also be used. Straight chain olefins are preferred. The solid adsorbent material of the invention may be selected from among the diverse inorganic oxides including alumina, silica, boria, oxides or phosphorus, titanium dioxide, zirconium dioxide, chromia, zinc oxide, magnesia, calcium oxide, silica-alumina, silica-magnesia, silica-alumina-magnesia, silica-alumina-zirconia. The reactants are introduced into the catalyst bed or reaction area. Product is withdrawn from beneath the reaction area, while unreacted reactants are withdrawn above the reaction zone (see supra).

It is acknowledged that Huss, Jr. et al. is silent about the boling point of the olefin feedstock. However the invention as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made because the reference's suitable feedstock, "alpha olefins having 3 to 20 carbon atoms" boling-point ranges would overlap the "greater than 180 F" range. Overlapping ranges was held to be evidence of *prima facia* obviousness.

5. Claims 1, 3-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chang et al. (USP 4,678,645) in view of Huss, Jr. et al. (US-PAT-NO: 4,935,577).

Chang et al. (USP 4,678,645) teaches a method for the conversion of LPG hydrocarbons to distillate fuels or lubes using integration of LPG dehydrogenation and MOGDL (Mobil Olefins to Gasoline/Distillate/Lubes) which involve two oligomerization zones. A heavy fraction from the second oligomerization zone is upgraded, by hydrotreatment, which corresponds to instant hydrofinishing and a heavy fraction thereof forms the lube basestock (see figure, col. 1, lines 55-68). The process employs a zeolite oligomerization catalyst, such as ZSM-5 or the like and a supported Pd catalyst in stabilizing the distillate product to form lube basestock. The reference further discusses how the oligomerization conditions can be adjusted in accordance with the desired product slate, i.e. operating in gasoline, distillate and lube modes (col. 2, line 35 - 68; col. 4, lines 3-28, 60-64, col. 6, lines 1-5, 60-67, col. 7, lines 22-45).

It is acknowledged that the Chang et al. does not employ catalytic distillation column. It would have been obvious to modify the Chang et al. process by performing the product fractionation and oligomerization within the same column as suggested by Huss, Jr. et al. (US-PAT-NO: 4935577) since Huss et al. discloses that the combined reactor/fractionator wherein product is continuously removed as it forms provides technical and economic advantages such as lower energy requirements, higher yields, good product purity and lower capital investment (col. 1, lines 20-25).

6. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Huss, Jr. et al. (US-PAT-NO: 4935577) in view of Sweeney (USP 4,527,004).

Huss et al. teachings have been discussed above. It is acknowledged that Huss, Jr. et al. is silent about the source of aplpha-olefinic feedstock.

Sweeney teaches a process for the purification of olefins, such as those obtained from Fischer-Tropsch process, or C5-C25 olefins obtained by the dehydrogenation of n-paraffins (see col. 1, lines 55-64). It would have been obvious to one having ordinary skill in the art at the time the invention was made to use Sweeney's olefinic product as feed to the oligomerization process of Huss, Jr. et al. because the olefins produced in Sweeney are the type that Huss, jr. Et al. calls for. Skilled artisan, given the suitable feed characteristics would not be limited as to the source of the feed, meeting the requirements.

Response to Arguments

7. Applicant's arguments filed on 4/29/2003 have been fully considered but they are not persuasive.

The applicant argues that the instant invention is distinguished from the Huss reference teachings in that the instant invention, by virtue of selecting the feed boiling in the claimed boiling ranges, avoids multiple oligomerization steps which are required by Huss process. The argument is not persuasive because the applicant's premise that Huss requires multiple oligomerization steps is not shared. As seen in claim 25, for example Huss to employs a single oilgomerization step in the catalytic distillation column, like the applicant. Trimer and tetramers are but an example component among

the products , the presence of which is not believed to lead one to the applicant's conclusion that multiple oligomerization steps are called for. It is still maintained, that the feedstream of Huss would substantially overlap in terms of boiling ranges, that of the instant invention. Minor variations in selecting the proper feed would be within the margin falling within the discretion of the practicing artisan. The applicant's arguments with respect to the Chang and Sweeney references are also based on the same central point of feed selection thus the same answer is applicable.

Conclusion

8. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

9.. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bekir L. Yildirim whose telephone number is (703) 308-3586. The examiner can normally be reached on weekdays from 9 to 6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenn Caldarola, can be reached on (703) 308-6824. The fax phone number for the organization where this application or proceeding is assigned is (703) 305-3599.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0611.
